## VOLUME FOR TIMING

- Volume is used to determine the right timing to enter or exit a trade.  
透过成交量来判断对的时机买卖
- Before entry, the volume must be less than half of the green candlestick's volume.  
寻交易时机时, 调整期的成交量须少于一半的大阳烛的成交量。
- The volume must be diminishing for at least force selling period is over before entry. 调整期的量须越来越少持续至**迫售日**结束。
- On Force selling day, the time to entry must be after 4pm. This is to ensure the force selling period is over. 须等迫售结束后才可以。
- If the volume is more than half between the force selling period, the timing for entry must be recalculated.  
当交易量超过支柱的交易量一半以上, 必须为重新计算。

风险掌控  
**RISK CONTROL**

风险掌控  
**RISK CONTROL**

- Risk control formula: 风险控制表.  
Support price + 5% = Max price for entry.  
支撑点 + 5% = 最高买入价.
- E.g: Given support price= \$1.00 支撑价.  
\*  $\$1.00 + 5\% = \$1.05$
- The price range which is suitable for entry will be \$1.01- \$1.05  
称安全控制价.
- Any price above RM 1.05 is considered as high risk.  
凡是高于 \$1.05 持定价被称高风险投资.
